40K120 Operation - Drying and Coning

Comply by: 7/16/2015

Not In Compliance

Reference - SBCC - 33.0920 (b)(1)

Inspector Comments: EXCESS OF WET MANURE IN ALL HOUSES. WET MANURE MUST BE REMOVED DAILY AND REPLACED WITH DRY. HIGH AMOUNT OF BREEDING FOUND ON THE FARM

Description: If the commercial poultry ranch owner or operator employs the drying and coning operation method of manure management, the following shall be complied with:

- (A) The process shall begin on dry ground or on a pad of dry manure in order to harbor predators and parasites and to provide an absorbent surface for fresh droppings. A deeper pad of dry manure may be necessary if the area beneath the poultry cages is sunk below the levels of the aisles. If necessary, to facilitate drying, broken up fresh droppings shall be stirred or otherwise mixed with the dry pad until a satisfactorily dry condition is attained.
- (B) Any system used for watering the poultry shall be maintained so as to prevent water from reaching the manure. System leaks shall be promptly repaired so as not to disrupt the effectiveness of the drying method. When necessary, the watering system shall be changed or upgraded to eliminate future leaks.
- (C) All wet spots in the manure created by water leaks or diarrhetic poultry shall be thoroughly removed and replaced with an adequate base of dry material as necessary.
- (D) Whenever it becomes necessary to remove the manure from under the cages, a six to eight inch pad of dry manure shall be left to facilitate the drying of the new cones and maintain a habitat for predators and parasites by one of the following methods:
 - (I) Removing every other row, then pushing half of the manure from the remaining row into the cleaned out row.
 - (II) Cleaning so as to leave at least six to eight inches of manure in each row.
 - (III) Cleaning out all manure and replacing it with at least a six to eight inch pad of dry manure from some other source.

40K141 Operation - Frequent Manure Removal

Comply by: 7/16/2015

Inspector Comments: ALL THE HOUSES HAVE EXCESS OF WET SPOTS WITH BREEDING. MOST OF THE HOUSES HAVE THE ENTIRE ROW IS WET MANURE. WET MANURE MUST BE REMOVED DAILY AND REPLACED WITH DRY MANURE.

Description: If the commercial poultry ranch owner or operator employs the frequent manure removal operation method of manure management, the following procedures shall be complied with:

- (A) Manure shall be removed frequently enough from under poultry cages to prevent fly larval migration and adult emergence.
- (B) Each time manure is removed from under the poultry cages, larvae and pupae shall also be removed in the fringe areas.
- (C) Aisles and borders of the poultry houses shall be cleaned of feathers and other debris frequently to eliminate pupation areas for fly larvae.
