			RESULT: 05 - CORRECTIVE ACTION / FOLLOW UP REQU	
			ACTION: 03 - REINSPECTION REQUIRED	

MOSQUITO AND VECTOR CONTROL - Poultry Ranch Permit ALL

No Violations Cited

Overall Inspection Comments

Adult fly population is moderate. Larval breeding is high. Ranch is applying triaziade on the wet spots can see it is working. Ranch is ravaping 2 times a day. Houses are starting to dry out. Still has alot of wet spots. Piles to the south of the property are breeding told sabino to thin them out and spray them. Rest of drying pad is dry and not breeding. Ranch owner spoke to another ranch in fontana and fontana suggested that he neprorex/ lyme and turn only the top couple inches of the manure. Ranch owner wants to apply triaziade and lyme and turn the first couple inches and see if that will resolve the problem and get the manure dried out. Told him it was ok to try and see if it will resolve the problem. Ranch needs to continue with ravaping 2 times a day and spot treating daily. Ranch to try new process. Ranch to continue fixing broken cups and continue with making the new adult bait stations.
